

Emergency Chiller Rental

Emergency Chiller Rental / -10° Low Temperature Cooling @ the O₂

Carrier Rental Systems has provided an emergency chiller rental package for the O₂ as their Ammonia Chiller Plant failed and with the ITV smash hit "Dancing on Ice Tour" due to start, the Facilities Management Team reacted rapidly and called in the specialist rental team.

- **Industry Sector:** Facilities Management / Low Temperature Cooling
- **Application:** -10° C Low Temperature Cooling / Ice Rink London O₂ [Ammonia Chiller Plant]
- **Project Details:** "Emergency Chiller Rental" - 2 Week Rental / London O₂

Customer Requirement:

Carrier Rental Systems have always worked closely with the O₂ and their site FM team; so when they called one afternoon asking how quickly we could provide an Emergency Chiller Rental Solution our response was "today if required". We had a site contingency plan in place and rapidly put it into action, with a brief to pull out all the stops and get it running as quickly as possible!

Emergency Chiller Rental - London:

As we had previously put an Emergency Chiller Rental Contingency Plan in place, we had a full breakdown on file of all the equipment that was required, where it would be located and exactly how we would provide the Emergency Chiller Rental Solution. We supplied our 600kw Chillers x 2, our latest low noise 455kw Carrier Chiller, multiple pump sets, manifold system and with them all connected via 4" & 6" Flexible pipe work to pre installed "hot tapings" into the main plant.

-10° c Low Temperature Emergency Chiller Rental:

We delivered this large Low Temperature Emergency Chiller Rental in London the same day and our engineering team worked through the night to get it running by 07:30 the next morning!
