

# Event Cooling

## Event Cooling – Peter Pan in London

Carrier Rental Systems has effectively provided another event cooling hire solution in London; with a strict brief that sound levels must be low and a demanding build schedule in London Royal Park.

- **Industry Sector** – Events, TV & Film Production
- **Application** – Event Cooling Hire / Marquee Cooling
- **Project Details** – “Planned Event Cooling Hire” - 26 Week Rental / London

### Customer Requirement:

Carrier Rental Systems were recommended to the organisers of the Peter Pan 360 CGI production for their event cooling requirements for their London show. The customer had a purpose built structure that required cooling for every performance and their brief was to have a quiet, user friendly solution and they didn't want the cooling equipment to be seen by the audience!

### London Event Cooling Project:

Our UK Events Sales Manager had been in discussion with the producers of the show for many weeks before the show started, ensuring that our event cooling package was designed around their needs and every aspect was covered to ensure a smooth and cool event. We supplied our latest “Low Noise” Air Handling Units, connected via 2” Flexible pipe work to our “Low Noise” Carrier Chillers, along with all the ducting, cables and distribution to give the complete solution.

### Event Cooling Hire from Carrier Rental Systems:

Delivery of an event cooling package into a Royal Park in London had to be planned and precisely executed due to the park restrictions. With our extensive experience within this area and providing a Senior Project Engineer to manage the site, we delivered a first class service.
