

# Event Heating

## Event Heating – Peter Pan Production Greenwich

Carrier Rental Systems has now completed the final stage of the tour, providing an event heating hire solution in Greenwich; ensuring the cast and 1,200 audience members remained warm.

- **Industry Sector** – Events, TV & Film Production
- **Application** – Event Heating Hire / Marquee Heating
- **Project Details** – “Planned Event Heating Hire” - 16 Week Rental / Greenwich

### Customer Requirement:

The organisers of the Peter Pan 360 CGI show were so impressed with the temporary cooling solution that Carrier Rental Systems provided for their London production; they commissioned us to provide the event heating solution when the show moved to the Greenwich location. Again they required a quiet and user friendly package to provide event heating for the duration of the show.

### Greenwich Event Heating Project:

The implementation and bespoke design from our UK Events Sales Manager made this project stand out to our customer, which resulted in our client continuing to use our services when the show moved to America. Not only was the system easy to use, but it provided event heating in the morning and was capable of cooling the audience in the warmer afternoons – this worked via external air handling units, flexible ducting into the structure and our latest “Heat Pump Chillers”.

### Carrier Rental Systems Event Heating Solutions:

The “Efficient” Heat Pump Carrier Chillers are capable of providing cooling or event heating, but the unique part is that when in event heating mode they don’t require any diesel fuel and this can save thousand of pounds in running costs – a true advantage of using a specialist hire operation.
